

Training IPP-Operator

Individualised training in power plant operation

Location

Vietnam

Client

Phu My 3 BOT Power Company

Expertise

Training, Operational Excellence, Combined Cycle Gas Turbine Power Plant

Our Services

- Development of a customised training package for plant operation
- Preparation of suitable training material
- Facilitation of operator and technician trainings

Project description

The first major independent power plant Phu My 3 is a 720 MW combined cycle gas turbine (CCGT) plant. We acted as technical advisor and trainer on behalf of BOT Power Company through its Operation Unit Phu My 3 Plant Management. The key challenge was to train and accredit staff for operation of the plant. Clear communication was challenging in the languages used on site: Vietnamese and English.

Our training support included the development of a customized training package, provision and delivery of suitable training material and on-site training facilitation by RWE training experts.

We helped transfer knowledge of international practices and standards in the areas of safe and efficient power plant operation to the client and the new operation and maintenance team.

Middle East & APAC
