

RWE

Our energy for a sustainable life

RWE is one of the leading global players in renewables.

We are shaping the green energy world of tomorrow

RWE has been generating electricity with great passion for 125 years. Today we are one of the largest global players in renewables.

Our task:

Our society's demand for electricity is constantly increasing. At the same time, we need to protect the climate. To achieve this, we need **safe and clean electricity**.

Our strategy:

We are setting the pace for a green future. With our **„Growing Green“** strategy, we are investing heavily in the expansion of renewables and storage technologies.

> 20 years

of experience in
renewable energy

55
bn euro

will be invested in green technologies from 2024 to 2030

We are driving forward the climate-neutral transformation of industry and society

Our goal:

to be climate-neutral by 2040

We are investing heavily in green technologies, making a significant contribution to the energy transition and decarbonisation. Specifically, this means, among other things: RWE is systematically reducing its greenhouse gas emissions – in line with the **1.5-degree reduction** path. That is why we are responsibly phasing out **coal-fired power generation completely** by 2030.

More than

65

gigawatts of green generation capacity by 2030

2022
SBTI base value

SCIENCE
BASED
TARGETS¹

0.6 kg
CO₂ per kWh

-70%
reduction

2030

0.17 kg
CO₂ per kWh

2040
Net Zero target

Our core business: Diversely positioned for a green future

Offshore Wind

Global
offshore
activities

Onshore Wind/Solar PV

Onshore, solar and storage
activities in Europe, Australia
and the Americas

Flexible Generation

- Hydro, biomass and gas power plants
- Hydrogen projects

Supply & Trading

- Trading/origination
- Gas & LNG
- Commodity solutions
- Gas storage

Actively shaping change

We are consistently investing in **innovative technologies and sustainability**, such as:

- Green hydrogen
- Floating offshore wind & solar PV
- Agrivoltaics
- Innovative battery storage
- Utilisation of CO₂
- Use of more environmentally friendly steel and recyclable rotor blades
- Recultivation and biodiversity

Our strengths along the value chain in the field of renewables

Securing of land & project development

Extensive
expertise

Planning & procurement

Global engineering
and local
commitment

Construction

On time and on
budget

Marketing

Customised
solutions
and financial
security

Operation

Many years of
experience as an
independent
operator

**Our energy has impact.
Use yours for good.**

The world around us is changing. And we are changing with it. We are over 20,000 people worldwide who work with passion and energy for a green future every day.
